

TECHNICAL DATA SHEET

DOUBLE CHARGING STATION

Charging station for 12 lamps

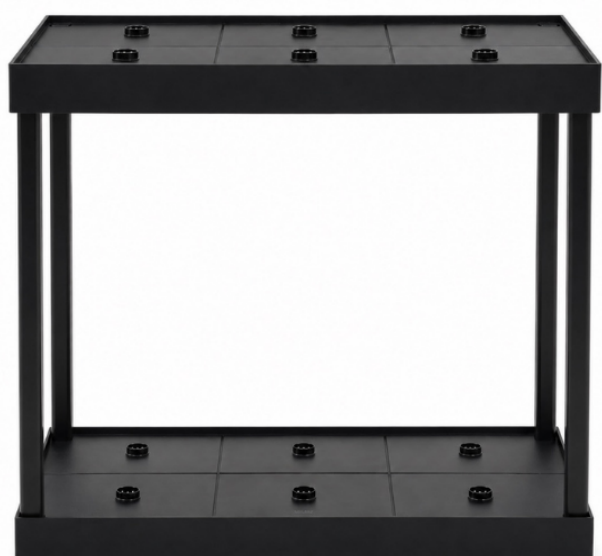

Altalum Voltex Collection

The Double Charging Station is a professional solution consisting of two stacked stations, allowing up to 12 cordless lamps to be recharged simultaneously.

Each level has 6 contact-charging positions. Simply place each lamp on its position so that the connector underneath its base comes into contact with the station's charging point. Charging is therefore simple, without having to connect each lamp individually with a cable.

Thanks to its two-level design, the station optimises space while centralising the charging of several lamps in a compact and organised installation.

It is particularly suitable for restaurants, hotels, bars, terraces, events and hospitality spaces that use several portable lamps every day.

Capacity	12 lamps simultaneously
Charging system	Contact charging
Input voltage	100–240 V AC
Frequency	50/60 Hz
Rated power	2 x 60 W
Output per charging point	5 V DC / 1 A
Dimensions	5-100%
Weight	2,455 kg
Use	Indoor / professional environment
