

TECHNICAL DATA SHEET

Charging station for 6 lamps

Altalum Voltex Collection

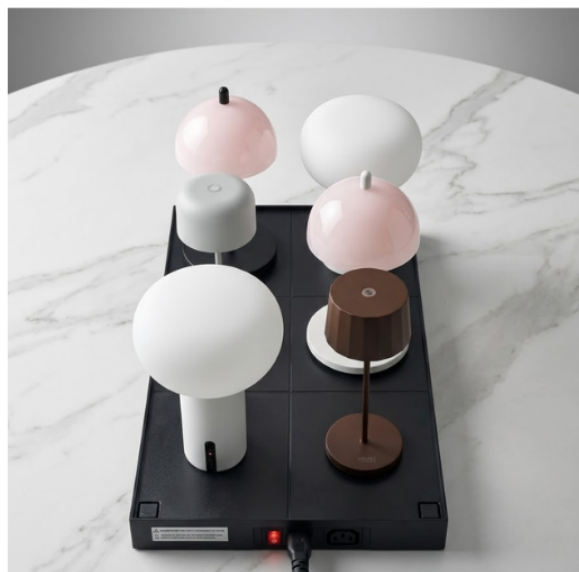

The CHARGING STATION 6 is a professional charging station designed to simultaneously recharge up to 6 compatible cordless lamps.

Each lamp is placed directly on one of the station's six charging positions. Charging takes place through contact between the connector underneath the lamp and the station's charging point, eliminating the need to connect each lamp individually with a cable.

Particularly suitable for restaurants, hotels, terraces, bars and hospitality spaces, it centralises the charging of several lamps on a single mains power supply and simplifies their daily management.

The station can also be stacked up to 2 levels, providing a compact solution for establishments using a large number of rechargeable lamps.

Capacity	6 lamps simultaneously
Charging system	Contact charging
Input voltage	100–240 V AC
Frequency	50/60 Hz
Rated power	60 W
Output per charging point	5 V DC / 1 A
Module dimensions	471 × 291 × 41 mm
Weight	2,455 kg
Use	Indoor / professional environment
